

ViewSonic ViewBoard Touch Displays

How to Thoroughly Disinfect and Clean Your ViewBoard

If you own a ViewBoard touch display, it's important to wash your hands thoroughly, and regularly clean your display.

Here's how to quickly and efficiently clean and disinfect your ViewBoard so that you and the people around you can stay healthy.

| Before You Start | Cleaning the Screen | Cleaning the Bezel |
|---|---|---|
| <ul style="list-style-type: none">• Make sure the device is powered off and the power cable is unplugged from the outlet.• Never spray or pour any liquid directly onto your screen or bezel. Doing so could irreparably damage your device. | <ul style="list-style-type: none">• Take a clean, soft, lint-free cloth and gently wipe down your screen to remove dust and other particles.• If your screen is still dirty, apply a small amount of 70% isopropyl alcohol (IPA) solution to your cloth and gently wipe down the exterior of your display. Alternatively, you can also use a 70% IPA wipe. | <ul style="list-style-type: none">• Take a clean, soft, lint-free cloth and gently wipe down the bezel to remove dust and other particles.• If your bezel is still dirty, apply a small amount of 70% IPA solution to your cloth and gently wipe down the bezel. Alternatively, you can also use a 70% IPA wipe. |

Whenever possible, try using a 70 - 75% IPA solution rather than a more concentrated solution (such as 90% to 99%). While stronger solutions might give the appearance of safety, 70 – 75% IPA solutions are more effective at penetrating the membrane of viruses such as COVID-19.

Solutions that are stronger than 90% require longer times for disinfection and may enable spores to lie dormant without being killed.

Always remember to wash your hands before and after using a touch display.
